

CARBON MANAGEMENT POLICY STATEMENT

1.1 Policy Statement

It is the policy of Lilleker Bros Ltd to manage and reduce the emissions from our operations and responsibly promote our achievements, with the aim of being a carbon neutral business.

Lilleker Bros Ltd will do this by:

Following international standards including the World Resource Institutes Green House Gas Protocol and Defra's GHG reporting guidelines for assessing carbon emissions.

Putting in place a carbon management plan to reduce emissions.

Setting targets to reduce emissions (on a per £million turnover basis) year on year.

Assessing and reporting our carbon footprint on an annual basis.

Offsetting our residual emissions through projects verified against the international Verified Carbon Standard (VCS), Gold Standard or Certified Emission Reductions (CERs).

Helping to develop best practice including lobbying the appropriate government bodies or agencies for change in support of our client's carbon management needs.

PAS2060 Methodology

1.2 GHG Protocol and PAS2060 Standard

Lilleker Bros Ltd's PAS2060 has been completed in line with guidance from the Greenhouse Gas Protocol, UK Environmental Reporting Guidelines, and the PAS2060 Standard. These documents outline best practice for company emissions reporting.

1.3 Emissions Factors

Emissions factors are used to calculate GHG emissions from activity data such as fuel consumption, production, or consumption statistics. An emissions factor is a representative value that relates the quantity of greenhouse gases released to the atmosphere with an activity associated with the emission of the pollutant. Lilleker Bros Ltd's carbon footprint was calculated using emissions factors from the *UK Government GHG Conversion Factors for Company Reporting* published by BEIS and DEFRA. The exception is electricity, which was calculated using the emissions factor associated with the supplier's fuel mix. These factors are released annually, and so may change year to year.

1.4 PAS2060 Organisational Boundary

For PAS2060 reporting, companies must specify an organisational boundary for the purpose of accounting and reporting GHG emissions. A range of approaches can be used to consolidate GHG emissions, such as the equity share approach, the financial control approach, and the operational control approach.

For Lilleker Bros Ltd's PAS2060, the operational control approach will be used. Under the operational control approach, a company accounts for 100% of emissions from operations over which it or one of its subsidiaries has operational control.
